

LAB: Error Handling

Lesson Time: 60 Minutes

Read the article on [javascript.info](https://javascript.info/try-catch) about Error Handling with try catch first.

<https://javascript.info/try-catch>

Once you've finished reading the article download the file 10_5Lab.js

Attempt to execute the 10_5_lab.js and it will error out.

Write try..catch statements to find and catch all of the errors in the script so that the .js file runs.

The last line of the lab prints the statement "CONGRATULATIONS! SCRIPT RAN WITH ALL ERRORS HANDLED". When you see this, you've caught all of the errors in the script.

Remember, this is a lab on try...catch, so don't fix the mistakes in the lab, just catch them with catch.
